To Whom It May Concern

I would like to highly recommend David Podolskyi as a Bachelor thesis student in the fields of AI, ML, and Data Engineering. I have worked as a Senior Manager at the AI Center of Excellence at Infineon Technologies while David supported our team as a working student. David impressed me from day one in various dimensions:

- He is highly committed to leveraging AI for practical problem-solving and using new technology subfields to reach tangible outcomes quickly.
- In addition to his studies and working student job at Infineon, David spends a significant amount of his time as the President of the TUM.AI, Germany's leading AI student initiative with over 100 active members with diverse technical and cultural backgrounds. His creativity and leadership in shaping TUM.ai are one of the initiative's greatest assets.
- David has wonderful qualities as a colleague — he goes the extra mile for a team, is a very attentive listener, driven by curiosity, and brings great energy to any new project.

David's achievements are even more impressive considering that he came to Germany for his Bachelor studies from Ukraine. He immediately mastered the new environment in a foreign country, excelled in his commitment to TUM.ai, and instantly convinced Infineon's AI experts that he is a highly skilled talent.

I wish David the best possible scholarly environment to further develop his technical skills and grow as a person. I strongly believe he will contribute a lot to the technical world and the common good in the future.

Best regards,
Dr. Sabine Donauer
