

# Letter of recommendation for David Podolskyi

26.05.2023

Munich

To whom it may concern,

I am writing this letter to recommend David Podolskyi. I have had the pleasure of having David as part of my team as a working student for 10 months as we collaborated on ambitious projects focused on Artificial Intelligence applications in our Products.

As a Senior Manager at Infineon's AI Center of Excellence, I had the opportunity to closely observe David's technical skills. In cross-functional projects that brought together experts from various fields, David's significant contributions were central to our success, thanks to his strong technical capabilities and effective interpersonal skills.

In complex and high-visibility exploratory projects, David was able to set up the data pipelines efficiently, define the experiments for the data exploration, and statistically explore the data coming from the experience to assess the feasibility of a Machine Learning approach. He showed excellent statistical knowledge and intuition throughout the project. He showed an excellent grasp of advanced Machine Learning concepts, which he used to steer the project in the right direction continuously. I was also impressed by his programming skills: the quality of the code he wrote was very excellent, reducing subsequent team members' onboarding time.

Beyond the technical skills exhibited by David, he also stood out by his high level of autonomy, drive, and interpersonal skills. Indeed, in a complex project where most team members worked from the US, he was able to consistently be a driving force behind the project with strong determination and drive. In addition, David was, from the very start, a force of proposition, consistently displaying initiative. David also leveraged his communication and interpersonal skills throughout the project. Working with senior experts from an entirely different field, David could clearly explain some of the advanced concepts he was exploring but also quickly understand and incorporate the expertise from his partners to refine his approach.

In conclusion, David is a standout candidate for any team working on Machine Learning challenges. His technical proficiency, motivation, and people skills set him apart from his peers. I am confident he will exceed your expectations and contribute significantly to your team.

Please feel free to contact me if you require any additional information.

Best regards,

**Simon Genot**
